

1. Untighten **ankle strap** (by loosening completely the **Buckle strap** from the **buckle** of the strap) as well as the **toe strap** so as to insert your boots and to adjust the **heel thrust** of **articulated binding** plate to your boot size. See Fig.3

2. Place the toe of your boot against the front part of the articulated binding plate, inside the toe strap, making sure the webbing of the strap is **above your boot**.

3. Adjust the heel thrust to the proper size of your boot using the Morpholock system. See Fig.2:

3.a move backwards totally the lock/unlock ring : (unlocked)

3.b raise the size adjust lever and move the heel thrust on the binding to the proper size of your boot : the heel of your boot must touch the back of the heel thrust for **perfect maintaining of the boot while snowshoeing**.

3.c when size is correctly adjusted move forward totally the lock/unlock ring : (locked)

4. Your boot is then well adjusted lengthwise: start **tightening the toe strap firmly** by pulling the printed webbing after insertion in the two holes quick buckle. Due to the flexible material of the binding front lateral parts your boot perfectly fits the binding.

5. Insert the loosened strap (step1) inside the two holes of the buckle of the ankle strap around your boot then **tighten the ankle strap** by pulling the strap **until you feel firmly tightened**.

6. **Snowshoeing:** keep **articulated binding** plate **free** from snowshoe base when going flat, traverse, uphill or downhill: the **RTS** unlocked from base locker/step in all cases. The articulated binding must **lay flat** on the snowshoe base or **stepping** on the **Base climbing Step** when climbing steep slopes: for this purpose rotate the **RTS** so as to have it lay on the Base Step (fig.3) with your gloves.

7. **After use, untighten ankle strap** first: pull up the **buckle** of the strap and pull out the ankle strap from the buckle. Then untighten the toe strap: pull up the end of the quick buckle and loosen the webbing. See fig 3. Remove your boot. **To store** the snowshoe push the articulated binding on the base and lock it to the base by **rotating the RTS** so as to **insert it into the base locker/step**.

8. **ALWAYS rinse** snowshoes with water and brush to remove mud and debris after every use.

.MORPHO® snowshoes don't have a right or left snowshoe. MORPHO recommends to wear the snowshoes so that the ankle buckle and toe strap buckle are on the outside of the foot so as to tighten ankle and toe straps in the easiest way.

.Kneeling on one knee and wearing the other foot snowshoe is the best position to be when putting on the snowshoes. This gives you the best grip and leverage for inserting and tightening the straps.

.Ankle and toe straps must firmly tightened around your boot

**.Do not snowshoe on rock or concrete**, this causes excess wear: take off snowshoes until you are back on snow.

## CHARACTERISTICS

- . Buckle type **ankle strap** with **quick buckle**
- .Intermediary composite climbing step, 1,7cm height
- .Binding locker: easy switch RTS with gloves
- .Stainless steel 2mm thick front knives
- .TRIMO© Patented snow TRIMaran shape:
- 3D MORPHOLOGIC, Hull shape tip:
- Contact surface: 2 x 1170 cm<sup>2</sup>,
- Weight per pair: **1.47 Kg, Ultra Light**
- Length: 63, max. width: 20.4cms, Tip Height: 9.4cm
- TRIM Angle: 20°

### GENERAL:

- .Material: polypropylene copolymere base, Polyamid 66 rigid articulated binding, polyacetal quick lock buckle type toe straps, 6 metallic spikes perfect grip
- .Base structure with "X" vertical stripes providing best grip uphill, downhill and in traverse.
- . Accepts all types of boots from 19 to 35cms, (graduation on the binding),
- . Very easy boot size adjust Morpholock system.
- . Guaranteed **2 years** down to -38°C, shock resistant.

**Local dealer STAMP**
