

1. Untighten **ankle strap** (by loosening completely the **notch strap** from the **buckle** of the strap) as well as the 2 **toe straps** so as to insert your boots and to adjust the **heel thrust** of **articulated binding** plate to your boot size. See Fig.3
2. Place the toe of your boot against the front part of the articulated binding plate, inside the 2 toe straps, making sure the two webbings of the forefront strap are above your boot.
3. Adjust the heel thrust to the proper size of your boot using the Morpholock system. See Fig.2:
- 3a-raise the **size adjust lever** with the help of **logo rubber tab puller** and move the **heel thrust** on the binding to the proper size of your boot: the heel of your boot must touch the back of the heel thrust for **perfect maintaining of the boot while snowshoeing**
- 3b-when size is correctly adjusted release the rubber tab: the heel thrust is then locked in the binding slots thanks to the teeth of the size adjust lever.
4. Your boot is then well adjusted lengthwise: start **tightening the 2 toe straps firmly** by pulling the printed webbings after insertion in the two holes quick buckles. Due to the flexible material of the binding front lateral parts your boot perfectly fits the binding.
5. Insert the loosened notch strap (step1) inside the ratchet buckle of the ankle strap around your boot then **tighten micrometrically the ankle strap** by moving back and forth the lever of ratchet buckle **until you feel firmly tightened**.
6. **Snowshoeing:** keep **articulated binding plate free** from snowshoe base when going flat, traverse, uphill or downhill: the **RTS** unlocked from base locker/step in all cases. The articulated binding must **lay flat** on the snowshoe base or **stepping** on the extra high **metallic climbing step** when climbing steep slopes: for this purpose rotate the **climbing step** forward in its upwards position (fig.3) from its idle position (fig.2) with your gloves.
7. **After use, untighten ankle strap** first: push on the **release lever** of the ratchet buckle and pull out the ankle strap from the notch strap while keeping pressure on the **buckle push release lever**. Then untighten the 2 toe straps: pull up the ends of the quick buckles and loosen the webbings. See fig 3. Remove your boot. **To store** the snowshoe push the articulated binding on the base and lock it to the base by **rotating the RTS** so as to **insert it into the base locker/step**. See fig.2
8. **ALWAYS rinse** snowshoes with water and brush to remove mud and debris after every use.

Fig.2 Size adjust lever Logo rubber tab puller

.MORPHO® snowshoes don't have a right or left snowshoe. MORPHO recommends to wear the snowshoes so that the ankle ratchet buckle and toe strap buckles are on the outside of the foot so as to tighten ankle and toe straps in the easiest way.

.Kneeling on one knee and wearing the other foot snowshoe is the best position to be when putting on the snowshoes. This gives you the best grip and leverage for inserting and tightening the straps.

.Ankle and toe straps must firmly tightened around your boot

.When rotating backward metallic climbing step to its idle position make sure to fully push it down until it is blocked by the 2 snowshoe base **rear hooks**. (fig.2)

.**Do not snowshoe on rock or concrete**, this causes excess wear: take off snowshoes until you are back on snow.

Fig. 3

CHARACTERISTICS

- . Ratchet buckle snowboard type **ankle strap** with **one** 22.5cm curved notch strap, micrometric adjustment, **WITHOUT** pad: excellent comfort
- .Extra high metallic climbing step, 5,6cm height
- .Binding locker: easy switch RTS with gloves
- .Stainless steel 2mm thick front knives
- .TRIM© patented snow Trimaran shape
3D MORPHOLOGIC, Hull shape tip
- .Contact surface: 2 x 1450cm², Weight per pair: **2.15Kgs**
- .Length: 78cm, max. Width: 25cm, Tip height: 10cms
- .Trim angle: 20°

GENERAL:

- .Material: polypropylene copolymere base, Polyamid 66 rigid articulated binding, polyacetal quick lock buckle type toe strap, 6 metallic spikes perfect grip
- .Base structure with "X" vertical stripes providing best grip uphill, downhill and in traverse.
- . Accepts all types of boots from 19 to 34cms, (graduation on the binding),
- . Very easy boot size adjust Morpholock system.
- . Silent kit, noise reduction by absorption
- . Guaranteed **2 years** down to -38°C, shock resistant.
